SUMMARY

Machine Learning Engineer (4+ years) with expertise in building production AI for ecommerce and enterprise. At Etsy and Fractal Analytics, I drove a 17% increase in conversions and 92%+ model accuracy. Specialist in MLOps (Airflow, Docker), RAG pipelines, and Agentic AI using PyTorch and LangGraph.

TECHNICAL SKILLS

Programming & Data: Python, SQL, C#, Pandas, NumPy, Feature Engineering, ETL Pipelines.

Machine & Deep Learning: PyTorch, TensorFlow, Scikit-learn, XGBoost, CNN, RNN, LSTM, Transformers.

Generative AI & NLP: RAG Pipelines, Vector Databases (ChromaDB, Pinecone, FAISS), LlamaIndex, BERT, GPT, Hugging Face, Semantic Search.

Agentic AI: LangChain, LangGraph, CrewAI, Multi-Agent Orchestration, ReAct Pattern, Tool/Function Calling, Prompt Engineering.

MLOps & Cloud: AWS (SageMaker, EC2, S3), GCP (Vertex AI), Azure AI, Docker, Airflow, MLflow, Prefect, FastAPI, Flask, Model Monitoring.

Theory & Ethics: AI Explainability (SHAP, LIME), Bias Detection, Linear Algebra, Statistics, Probability, Optimization.

PROFESSIONAL EXPERIENCE

Etsy — New York, USA

Jan 2024 – Present

Machine Learning Engineer — Contract

- Increased conversions 17% and engagement 11% by deploying recommendation engines and Transformer-based NLP models (BERT, GPT); boosted inference speed 28% through real-time API optimization for peak traffic scalability.
- Architected end-to-end automated pipelines using Airflow, MLflow, and Docker, reducing deployment cycle times by 40% and ensuring seamless production transitions.
- Maintained 90%+ predictive accuracy via automated drift monitoring and retraining; integrated SHAP/LIME explainability to strengthen stakeholder trust and compliance in regulated environments.

Cisco Systems — Hyderabad, India

Jan 2023 – Jun 2023

Machine Learning Engineer

- Engineered high-throughput Python and C# workflows to process large-scale enterprise datasets; developed REST APIs and .NET-based services for seamless model integration, significantly reducing manual effort and technical debt.
- Automated training pipelines using Airflow, accelerating iteration cycles and minimizing manual intervention; leveraged C# and .NET framework components to enhance accuracy and maintainability for core classification tasks.
- Partnered with engineering teams to deploy and maintain robust ML models within complex, large-scale enterprise infrastructure, utilizing .NET tooling for cross-platform service compatibility.

Fractal Analytics — Hyderabad, India

Mar 2021 – Dec 2022

Junior ML Engineer

- Achieved 92%+ accuracy and a 23% boost in forecast precision by architecting CNN-based image analytics and LSTM time-series models for healthcare and supply chain optimization.
- Reduced API latency 35% by containerizing services with FastAPI and Docker; streamlined end-to-end lifecycles through automated preprocessing and retraining workflows using Airflow and Prefect.
- Engineered domain-specific features for complex datasets to improve model resilience; ensured predictive reliability through rigorous evaluation using Precision-Recall, F1-score, and ROC-AUC metrics.

EDUCATION

Master's in information systems and technologies
Wilmington University, Delaware

Sept 2023 – May 2025

PROJECTS

AI-Powered Document Intelligence Platform (RAG SaaS)

- Built a scalable RAG-based system to enable conversational querying over PDF and structured documents.
- Used LlamaIndex and Pinecone for vector search and semantic retrieval. Developed REST APIs using FastAPI with authentication and user management.
- Integrated OpenAI API for contextual response generation. Deployed on AWS using Docker (EC2/S3), enabling real-time inference. Reduced manual document search time by 40%.
